Continuation of 5. does NOT place the application in condition for allowance because: A new oath is required for reasons of record. Applicant previously stated that a new oath would be submitted but in the present response argues that one is not needed. The basis for this argument does not address the reasons a new oath was required as set forth in the first Office action. Applicant asserts that the specification provides antecedent basis for the claim language. Applicant is requested to point out basis for the language "wherein the selectively cleavable link comprises at least one amino acid and further wherein said link provides for a selectively cleavable site" as well as for the particular cleavable links of claims 25 and 27-28. Applicant is referred to explanation of this lack of antecedent basis in the fina Office action. Applicant must file a proper terminal disclaimer in order to be responsive. The double patenting rejection of record will not be held in abeyance. The art rejection against claims 18-21 is maintained for reasons of record. The secretory signal sequence of Hallewall is a heterologous polypeptide within the meaning of the claims. A fusion protein where a secretory signal sequence is the heterologous polypeptide fused to superoxide dismutase is not precluded by the claim language. The language "heterologous polypeptide" does not require any particular number of amino acids, full length protein, or functionality in the claim as written. Finally, it would have been well known in the art that secretory signal sequences are selectively cleavable. It is unclear on what basis applicant is arguing otherwise.
